TARGET AUDIENCE

This course is designed for pain practitioners (pain
specialists, anesthesiologists, neurosurgeons) utilizing
intrathecal drug delivery for pain management both in
cancer and non cancer patients. Also interesting for those
who treat severe spasticity.

Physicians attending the course should have at least 2
years of practice with ongoing use of Intrathecal drug
delivery techniques in the treatment of chronic pain and/or
spasticity patients, and with basic knowledge of spinal
analgesia using intrathecal drug delivery.

Our gratitude for the collaboration given by the following
companies:

OBJECTIVES

After participation in this educational meeting, participants
should have an understanding of:

1. Basic neuroanatomy related with the performance of
intrathecal drug delivery
2. Current imaging and neurophysiology relevant for
performing diagnosis and performing the intrathecal
drug delivery for pain & spasticity treatment
3. Identify questions that need to be addressed to increase
knowledge of intrathecal techniques used in chronic pain
treatment
4. Current indications of Intrathecal drug delivery in chronic
pain and recommendations for the evaluation and man-
agement of these pain conditions
5. Evidence-Based recommendations and strategies in the
patient screening and follow-up, in the management of
intrathecal drug delivery analgesia
6. Learning Case scenarios for the acquisition of critical
assessment and management skills
